Experience

Lead Consultant

Withum • Bengaluru, Karnataka

09/2023 - Present

- Part of **Dynamic Auditing Solution(DAS)**, an auditing web application. An Advanced, end-to-end, data-driven audit platform leveraging guided workflows, real-time collaboration, and robust analytics to enhance audit quality and efficiency. Responsible for developing various auditing forms, workflows, and backend business logic to drive the application.
- Contributed in Developing various UI components for representing auditing workflows that made the auditing workflow hassle free and simple for the auditor..
- Contributed in developing and maintaining backend logic related to auditing workflows.
- Led a team, which ideated and implemented **ReportCast(Vani)**, a **POC LLM(AI) powered solution designed to streamline data conversion and workflow automation**. The application utilizes LLM capabilities to accurately transform unstructured inputs (voice and images) into a business-defined language model(cross language conversion), then generates structured data outputs ready for direct ingestion into core business workflows, dramatically reducing human processing time and cost.
- Part of Various LLM(AI) Powered Application development
- **Drove the successful adoption and learning initiatives for LLMs(AI) across the digital vertical**. Developed comprehensive adoption guidelines and shared knowledge resources, directly resulting in enhanced developer productivity and faster creation of innovative, AI-powered client solutions.

Sr. Associate, Application Development

AT&T • Bengaluru, Karnataka

11/2021 - Present

- Part of **IGEMS-NG**, a network monitoring web application. Responsible for designing and developing various dashboards and corresponding widgets.
- Contributed in Developing various UI components for representing network related data that was easy to consume for end user.
- Contributed in creating a CMS for our web application, in order to reduce the code base and creating of user requested dashboards/widgets in a faster and better way.
- Enhanced Performance and UX by implementing various concepts like lazy-loading, resource-hinting and caching.
